ICOM vehicle mobile or fixed location VHF Hire Radio

The ICOM F110 25 watt, 4 channel VHF vehicle or “base” radio transceiver provides a powerful means of communication in several different situations:

- Vehicle-to-vehicle communications.
- Base-to-vehicle – One ICOM radio is set up in a fixed location, with a mains transformer and an antenna mounted high up on the building or other structure, to communicate with other radios installed in vehicles.
- Base-to-walkie-talkies – If you have a group of people using our Kirisun VHF walkie-talkies around a large site, you can also use the ICOM mobile radio as a central base station, its greater power ensuring that all the walkie-talkie users can hear messages from the base station.

It is a compact, robust and reliable radio offering up to 25 watts power output. It is extremely simple to use – just an ON/OFF switch, a volume knob and a button to choose one of the four available channels.

Hired for vehicle use, kit includes radio, cigarette-lighter power lead, and magnetic-mount aerial to stick to vehicle bodywork

Hired for “base station” use, kit includes radio, 240v AC – 12v power transformer unit, and “clip-on” aerial with a 10 metre lead
