

Amherst Walkie Talkie Radio Hire Centre

Using SIM Card Equipped Walkie Talkie Radios For Managing Marathons, 10K Races, Cycle Races Etc

The Need For Walkie-Talkie Radios For Event Stewards / Marshals

When you organise a marathon, 10K run, other “fun run” or cycle race, you will need to have course marshals / stewards positioned all along the race course.

These event staff need walkie-talkies to stay in touch with each other and with the event control point.

Their tasks include reporting contestants taken ill or having problems requiring help, dealing with emergencies, managing spectators, etc.

Conventional Walkie-Talkies and Range Limitations

Standard walkie-talkie radios have a range of only a couple of miles, and this can be even lower in amongst built-up streets of houses and other buildings.

This presents a big challenge for organisers of long-distance races because course staff at one end of the event course are likely to be “out of range” of staff at the other end, and it would not be possible for an “event manager” to get a message out to all of the marshals and stewards.

The Solution: SIM-card Network Walkie-Talkie Radios

We have a new type of walkie-talkie radio for hire that contains a mobile phone network SIM card, and that uses the mobile data network to transmit messages over an unlimited range, provided that there is phone network coverage available.

These radios will allow all your race marshals to stay in touch even around a full marathon course or an even longer and more spread-out area, such as a long-distance cycling event.

If you are organising a distance race and would like to hire some of our SIM card radios, please contact us using the details below.

We can also loan you a couple of the radios well before your event, so that you can test them out around the event course.
